Interests

technology, cybersecurity, multimedia production, IoT, body-building, beach tennis

Introduction

Software developer with a degree in Computer Science, experienced in IT administration and technical consulting. Currently R&D software developer, previously systemintegrator for cloud and on-premise infrastructures (Lepida datacenter).

I develop full-stack solutions both in-house and for customers, with a predisposition for Laravel (PHP). I enjoy mostly working on back-end tasks.

Strong orientation towards design, automation and training, with a great interest in IT security. I deal with the entire software lifecycle, from design to monitoring, preferring rigorous practices, innovative tools and maintainability.
